## Changeover & Bypass Switches

## On Load Changeover Switches (with & without Fuses)

### Salient Features

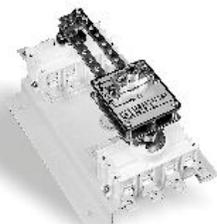

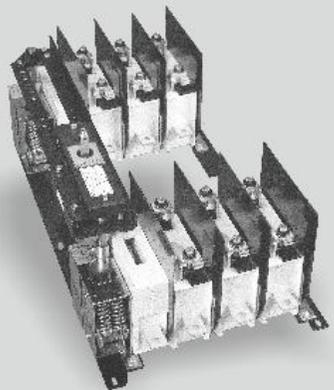

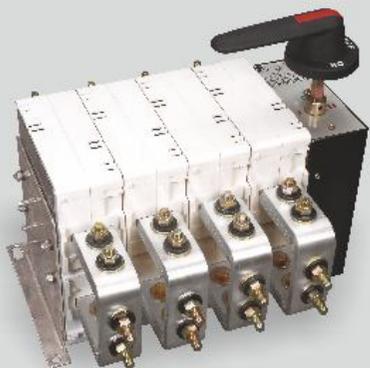

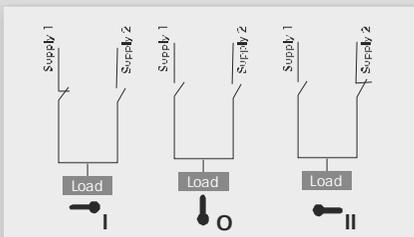

- Modular design in 3 & 4 pole (63A ~3150A), suitable for utilization category AC-23A
- Easy maintenance as each pole can be replaced easily due to modular construction, saving cost of entire Switch in case of single pole being burnt or damaged.
- Available in open execution & in sheet steel enclosure. Complies with the latest requirements of IEC-60947-1&3 / 13947-1&3 standards.
- Unique self cleaning contact construction with special knife type (200A~1800A), double break switching contacts (63~160A & 1000~1800A) & single break (200A~800A). Positive opening operation, with quick make - break and effective arc splitting plates guarantee reliability and long electrical life of the Switch.
- Excellent tracking resistance of isolation material in switch frame prevents flashover between phases even in the most trying & difficult locations.
- Adjustable telescopic shaft
- Compact construction
- Window for visual contact inspection
- Suitable for capacitor switching and as a Main switch
- Handle with in-built padlockable facility in-off position
- Provision for defeating door interlock
- Individual phase barrier can be incorporated without tools, between two terminals. Fully protected frame for safe operation in case of (200A~800A)

### Function

- These changeover switches are used to control & disconnect any kind of circuit-disconnection feeders both resistive & inductive loads
- By means of manual operation, changeover performs circuit switching between two independent circuits-I & II

### Accessories

- Auxiliary contact (early break type) 1NO + 1NC or 2NO+2NC is available
- Key & Castle lock facility

## Compact On-Load By Pass Switch

### Salient Features

- Range 63A ~ 1800A, 4 Pole.
- Complies with the latest requirement of IEC 60947-1&3 and IS/13947-1&3
- AC23A utilization ratings available.
- By-pass Switch is designed to customers specific need in IT industries and sites where UPS and Servo stabilizer provides main source of supply
- All other features are same as of On Load Changeover Switches

### Operation

C&S Compact On-Load By-pass switch is operated manually with single handle comfortably. It provides three stable positions:

Position	Operation
O	Loads are open circuited
I	Loads are connected to the stabilized supply
II	Loads are connected to the normal supply

### Auxiliary Contacts

Auxiliary contact (early break type) 1NO+1NC or 2NO+2NC

### Single Line Diagram

When By-pass switch is selected at position 'O' all the contacts of isolator are open circuited and provide total isolation.

In position 'I' both isolator I & III are closed and stabilized supply is connected to the load. At position II only isolator II is closed & isolators I & II are open thus bypassing UPS & connecting normal supply directly to load

### Switch Construction

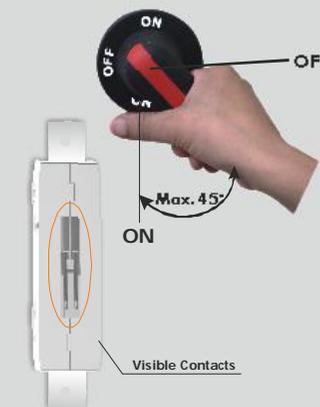

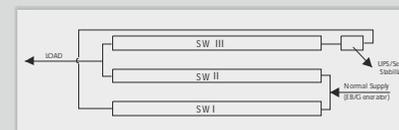

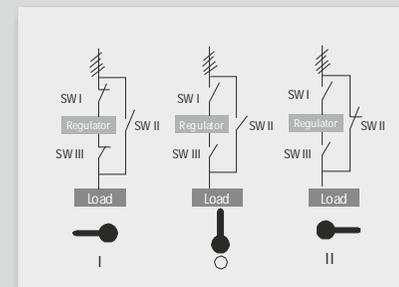

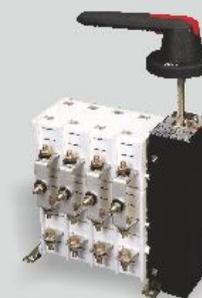

### Safety Built-in

C&S pioneered the concept of positive isolation in case of welding of contacts. In the event of extremely high current leading to welding of contacts, the handle will not turn beyond 45° from the ON position, clearly indicates that the supply is ON and contacts get welded.

Convenience of easy contacts visibility, permits contact inspection, without removing the switch from installation, thus saving down time.

Self extinguishing fibre glass re-inforced insulating body of poles has very high tracking index. Large gap between fixed and moving contacts in OFF position, make them suitable for isolation function.

Door interlocking prevents opening in the ON position, guarding the operator against any accidental mishap. As a standard upto 3 padlocks are provided in the OFF position to prevent closing the circuit during maintenance work. They can also be provided in the ON position. Using a suitable gasket alongwith handle enhances ingress protection level to IP 54.

## Compact On Load Switch Disconnecter Fuse Changeover

### Salient Features

- Suitable for utilization category AC-23A & comply to IEC 60947-1&3/IS13947-1&3
- Protection against over load & short circuit faults by fuse of HRC -80kA rms
- Compact & standardized size for range 125A-800A & spacesaving for panel builders
- Protection for two modes with backup fuse

### Function

- C&S Compact On Load Changeover is manually operated 4 Pole switch disconnecter fuse with position I-O-II with backup HRC fuses fitted in phases. The switch offers protection in position-I as well as in position-II to the load connected thru common outgoing.
